

LifePilot

Your on-device wellness co-pilot. Nothing leaves your phone.

● 4 AI features · 0 servers · works in airplane mode

THE PROBLEM

Wellness apps want your data. That's the business model.

- 1 Your health, mood, spending, and location get **shipped to servers you don't control**.
- 2 A "privacy policy" is really **permission to monetize** the most intimate data you have.
- 3 Turn off the internet and most "AI" wellness apps **stop working entirely**.

THE SOLUTION

Every AI inference runs **on-device**, via ExecuTorch.

The app works **identically in airplane mode** — that's not a fallback, it's the whole architecture. The only network calls that exist are opt-in and off by default: a coarse-location weather lookup and optional model updates. Neither ever sends anything about you.

WHAT IT DOES

Four on-device models, one calm app

Overwhelm Manager

Llama 3.2 1B · QAT-LoRA · ExecuTorch

Breaks a freeform task into 5–8 calm steps; personalizes from on-device memory. Optional voice input (Whisper tiny.en).

Energy Planner

Trained time-series model

Predicts a 24-hour energy curve from your sleep and activity via Health Connect.

Hydration Tracker

Trained regression model

A personalized daily water target, optionally sharpened by local weather & AQI.

Expense Scanner

On-device OCR + extraction models

Camera or PDF receipt → structured expense. Handles currencies worldwide.

LIVE DEMO

Everything you're about to see ran with the **radio off.**

Airplane mode on. Overwhelm breaks down a real task, streaming steps live. A receipt is scanned to a structured expense. The hydration target updates with the live-weather toggle. All on the phone's own compute.

Bundled-first. Update-optional. Pin-gated.

 **Opt-in weather** — coarse, grid-rounded location only. Off by default.

 **Opt-in model updates** — model-in only. Nothing about you is ever sent.

Ships a working model per feature that **works offline forever**, even if no update is ever fetched. React Native (Expo, New Architecture).

USE OF AMD

AMD MI300X / ROCm is our training & export pipeline

The shipped app never calls AMD or any cloud at inference — that's the point. **AMD compute produces the intelligence; the phone runs it privately.**

WHY THIS IS A UNICORN

A privacy moat incumbents structurally can't copy

The market

Wellness apps are a \$6B+ category — built, today, on data monetization.

The wedge

A fast-growing set of users (and regulators) who won't accept that trade anymore.

The moat

Incumbents' revenue depends on the cloud pipeline we removed — they can't follow without breaking their own model.

Expansion: the same on-device engine extends to sleep, focus, and finance — plus an audio-only Smart Glasses layer (phone-as-brain, no cloud).

COMPLETENESS

Built, and running on a real phone today

- ✓ All 4 features live, on-device
- ✓ Worldwide expense parsing
- ✓ Custom onboarding + app icon
- ✓ Installs as a standalone APK
- ✓ Verified in airplane mode
- ✓ Persistent on-device stores
- ✓ Test coverage on core logic
- ✓ MIT code · Built with Llama (compliant)

Intelligence that stays yours.

The smartest wellness app that never phones home.
